FluidForming Americas Celebrates 5 Years Redefining Modern Manufacturing

Hartsville TN, USA: FluidForming Americas, and their signature FormBalancer product line is celebrating five years of service to the American manufacturing marketplace. The company offers bladderless precision hydroforming, associated engineering services, and equipment leasing to its growing customer base. Primary applications are in the aerospace, medical and automotive industries, where bolstering overall profitability is key. However, many other consumer goods producers also enjoy the benefits from the innovative technology.

FormBalancers apply a forming pressure of up to 60,000 psi that allow complex parts creation, at lower costs, in a wide variety of metals such as titanium, aluminum, stainless steel, and copper without the use of trouble-prone bladders.

“Since the opening of our product line to the Americas we have seen a marked increase in our expansion efforts” says the founder/inventor of FluidForming GmbH, Dipl.-Ing. Reinhold Wesselmann. Paul Benny, President of FluidForming Americas, LLC added “We are proud to be able to provide these outstanding customer-focused solutions with our versatile FormBalancer product line. Whether our customers want to lease machines for large production volumes or simply get turn-key parts delivered to them, FluidForming Americas will continue to provide today’s savvy manufacturer with lower operating costs and greater capability.”
